WE HAVE BEEN HERE FOR YOU FOR A QUARTER OF A CENTURY

Dear customers and trading partners,
It is with great pleasure that I welcome you to the release of our new catalogue. The catalogue represents an annual milestone, in which we try to not only present the individual product lines, but also the values we stand for. To express the fact that textiles are not just a commodity, but a way of expressing one's own personality, a carrier of your brand and even the very message to your customers. For more than 25 years we have been striving to provide you and your customers with textiles that fulfills this mission, expanding our offer with new products every year while increasing the range and level of services.

Thank you for your trust and for being with us this year. We are proud to be a part of your success and look forward to another year of challenges, opportunities and collaboration. I believe that this catalogue will also bring you inspiration and help you find the right products to satisfy your customers in fulfilling their needs.

Sincerely,

Radek Veselý
Chairman of the Board of Directors

1999

FOUNDING OF THE COMPANY

Two high school classmates, Martin Hausenblas and Pavel Neumann, start their own business. However, in contrast to the original plan of creating an advertising agency, the company becomes a supplier of its own advertising textiles due to increasing demand.

2000

FIRST CONTAINER OF T-SHIRTS

The very next year, the first container arrives from China containing 32,000 T-shirts in four colours (white, black, navy blue and grey) in four sizes. The entire shipment is sold out in two weeks.

2003

MOVING TO NEW PREMISES

The rapidly growing number of employees and products not only requires administrative space, but above all a larger warehouse. The owners therefore buy a building in Ústí nad Labem and adapt it for these purposes.

2005

PRODUCTION EXPANDS FROM CHINA TO BANGLADESH

The growth in sales logically leads to the expansion of production from China to Bangladesh and then to other Asian countries.

2011

LOGISTICS CENTRE OPENS IN OSTRAVA

Increasing stock requirements initiated the opening of a logistics centre in Ostrava-Přivoz and, thanks to the company's rapid growth, the first shipments of goods from the ultra-modern logistics centre in Ostrava-Kunčičky commenced in 2015.

2012

COMMENCEMENT OF SALE OF BASIC T-SHIRTS

The company launches sales of its most popular product to date, the BASIC men's T-shirt, which becomes the company's flagship product. The subsequent launch of the luxury advertising textile brand MALFINI (now Malfini Premium) clearly defined the company's path towards ever-increasing quality.

2016

OPENING OF A NEW OFFICE BUILDING IN ÚSTÍ NAD LABEM

Employees move to a new office building in Ústí nad Labem, built to provide maximum energy self-sufficiency. Due to the growing production and development of new products in Asian countries, the company opens an office in Beijing, China.

2020

FROM NOW ON WE ARE MALFINI

In the year marked by the coronavirus pandemic, we used our contacts and capabilities to produce and distribute protective equipment. In December, the company is renamed from the original ADLER Czech to MALFINI, a. s.

2023

AUTOMATION OF THE WAREHOUSING SYSTEM

We constantly work towards improving our services and providing you with better service. The automated AutoStore system allows us to pick and dispatch goods from our warehouse in Ostrava even more efficiently.

OUR BRANDS

You will always find the right outfit for various occasions in our wide portfolio.

It will appeal to anyone who prefers exclusive materials and elegant workmanship.

With playful colours and tear-off labels, you have your own T-shirt collection within reach.

Workwear you can rely on and look great in too.

THE UNSTOPPABLE PROCESS OF DESIGNING NEW PRODUCTS

We have two main seasons when we introduce new products, but the design and preparation process runs almost non-stop throughout the year.

IDEA

Incentives for new products come from different sources. Of course, we follow the market and current trends, and we also get ideas directly from our customers. Thanks to this, we have an inexhaustible source of inspiration. This allows us to create our product portfolio, add new products, reinvent collections and redesign existing models to suit your needs.

DEVELOPMENT

Next comes the technical part of the process, when the final cut of the product is decided. We prepare a precise sketch including a detailed description of all specifications. This includes careful selection of materials and colour variations in which the product will be sold. Every single step is important and requires maximum effort.

PRODUCTION

We want to fine-tune every prototype down to the very last detail. We check all modifications several times to make sure they are according to their original specifications. Whether it's the cut, the colour, the individual elements, everything goes through rigorous testing to ensure the highest quality. Only once we are completely satisfied do we begin production.

QUALITY PRODUCTS ARE A MUST

Not even the best additional services can make up for the absence of the most basic requirements. That is why the quality of our products is absolutely essential to us.

SELECTION OF SUPPLIERS IS CRUCIAL

Accountability for the entire production process is one of our key priorities. We base our relationship with our suppliers on respect, fairness, equality and longevity.

During the selection procedure, the quality and range of materials used, as well as the precise processing according to the specifications and, of course, the ability to meet deadlines are key for us. We also ensure that all production processes are carried out in a way that respects the sustainability of our planet and maintains good working conditions for all employees. That's why we prefer suppliers who hold globally recognised certificates.

REGULAR INSPECTION

Because we need to monitor so many different aspects at the same time, we need to keep an eye on everything during actual collaboration. We want certainty. We carry out regular on-site inspections with the help of our colleagues from Asia and the Czech Republic. In the factory, we monitor all the above-mentioned quality specifications and working conditions. In short, we want to dress the world responsibly.

PRODUCT TESTING

To ensure that our products are of the highest quality, we test and inspect them after delivery, even here in the Czech Republic.

At the goods reception in the logistics centre, a quarter of the goods from each container go through a so-called MAX check, where we check each box for size, number of pieces and colour shade. 10% of each shipment received then undergoes a thorough quality control process that includes measuring dimensions, comparing colour to the master draft, weighing, checking shrinkage using wash tests and other details.

YOUR IDEA, YOUR BRAND

Whether you need to dress an employee, a group of friends or simply when you want to create your own clothing collection, there's no easier way. You just need an idea and we'll take care of the rest.

- ① IT ALL BEGINS WITH YOUR UNIQUE IDEA
- ② CHOOSE THE PRODUCT YOU WANT TO PRINT
- ③ WE WILL BE HAPPY TO ADVISE YOU ON THE CHOICE OF BRANDING TECHNOLOGY
- ④ THE DEVIL IS IN THE DETAILS, THAT'S WHY WE CAN ALSO CUSTOMISE THE LABEL
- ⑤ ONE-PIECE PACKAGING LOOKS PROFESSIONAL
- ⑥ THE FINAL RESULT IS YOUR OWN MERCH THAT MAKES QUITE THE IMPRESSION

Create your own collection.
Let your creativity loose and become a fashion icon! Create your own collection
or brand and shine like never before. No worries about labels.

- 1. your own label
- 2. tear-off label
- 3. sticker label
- 4. label-free

Certified by Intertek
149203

Behind every product that bears the Global Organic Textile Standard label lie the strictest regulations, from cultivation to production.

The globally respected GOTS certification guarantees organic and ethical production and quality throughout the supply chain.

Everything must be free from chemicals. Only natural methods are utilised, and no artificial fertilisers, pesticides or insecticides are used. At the same time ensuring safe working conditions for all employees, from cotton harvesting to clothing production.

Thanks to this certification, you can be sure that we wear clothes produced on the principles of ecology and ethics.

CERTIFIED BY INTERTEK
149203-GRS

The GRS (Global Recycle Standard) certification aims to increase the use of recycled material in the textile industry. The certification sets requirements for a minimum percentage of recycled fibres. To carry the GRS label, products must contain 50% to 100% recycled material.

GRS follows at how textile production affects the natural world and people's lives. This standard consistently requires environmentally friendly manufacturing practices that protect the environment. All steps must be carefully recorded, including resource consumption and waste management. Hazardous chemicals have no place in production, and manufacturers must ensure a safe working environment and adequate compensation for their staff.

THE NEW STORAGE SYSTEM BENEFITS EVERYONE

Robotics and automation are the alpha and omega of modern logistics, and success depends on the right sales setup. The MALFINI distribution centre in Ostrava is a clear example of this.

70
ROBOTS

UP TO
190,000 TEXTILES
PER DAY

50% HIGHER
LABOUR
PRODUCTIVITY

Thanks to the installation of the AutoStore system, the storage capacity of the 2,650 m² warehouse was increased up to 20%. Other key benefits include a 34% reduction of errors, faster dispatch and increased capacity, reduced energy costs and more accurate order processing.

Operators had to walk up to 18,000 steps a day before the new technology was installed. Today, they work from a stationary workstation, which improves ergonomics and reduces physical strain.

"All optimisations result in increased efficiency and better numbers, not only in productivity and error rates. I would also mention improved working conditions, increased safety and a reduction in the physical demands on the operators."

Michal Seltenreich, Technical Director

AutoStore robots enable accurate identification, handling and arrangement of goods, reducing the risk of errors and losses. The new facility can hold up to 100,000 plastic boxes, which is the equivalent of roughly 100 trucks.

WITH US, CARE IS PROVIDED BY PEOPLE, NOT ALGORITHMS

It may not be as common in this day and age of technology and automation, but a personal approach and quality service is still one of the pillars of cooperation in our company.

37
COUNTRIES

12 WORLD
LANGUAGES

4,800 CALLS
PER MONTH

While automation and digital communication are on the rise, we still rely on a personal approach. Our operators pay each customer individual attention. With us, you can be sure that we won't just entrust you to algorithms, but there will always be a human on the other end of the line to help you. It is important for us to maintain contact with our customers and provide them with first-class service that goes beyond the usual automated processes. This approach allows us to build long-term relationships based on trust, reliability and a human approach.

We operate from five key offices:
ÚSTÍ NAD LABEM (CZ), DRESDEN (DE), ZAGREB (HR), BUDAPEST (HU) AND HUNEDOARA (RO)
We have nine showrooms in eight European countries.

We help our customers with their requirements on a daily basis. Last year, we handled a total of 58,000 incoming calls, an average of 4,800 calls per month. We mostly deal with orders, recommend suitable textiles or determine the current status of deliveries in cooperation with carriers. In addition, our operators also handle a large number of email enquiries.

FUN FACT

The longest recorded call with our Italian client lasted an incredible 56 minutes.

WE SUPPORT YOUR SUCCESS

We don't want to 'just' deliver a quality product. We care about delivering the best possible service for your successful business. That's why we try to go above and beyond the standard expectations.

YOUR OWN E-SHOP IN NO TIME

There is probably no easier way to go about selling something these days. Creating your own e-shop may seem like a daunting task at first, but there are three easy ways to implement all of our product data, pricing and stock availability.

ONLINE CATALOGUE IN A FEW CLICKS

If you don't need your own e-shop, we offer you the possibility to create your own version of our e-shop using the ONLINE CATALOGUE function. It gives you your own web-address with all our products, including an enquiry option.

B2B rest API – the most advanced and best solution, connected automatically directly to our system, enables the automatic sending of orders.

XML feed – automated data file, supported by almost all current systems and turnkey e-shops, super easy to implement.

CSV file – one-time data export, quick and easy implementation, no need to update manually when any change is made.

SAMPLE SET WITH 25% DISCOUNT

Up to four times a year, you can order a selected mix of products with a 25% discount. You can touch and try out new products yourself or show them directly to your customers.

MOVING FORWARD TOGETHER

Wealth lies in information. We are constantly trying to acquire new knowledge from different sources to share with you.

WE EXHIBIT AT MAJOR TRADE FAIRS

Several times a year, we visit important textile trade fairs all over Europe. This gives us access to the latest information and of course provides us another opportunity to meet our customers.

PREPARING JOINT MEETINGS

We try to hold a meeting with our customers once a year in each of the countries in which we operate. We'll present news, gather information from you, or just chat.

WE PASS ON INFORMATION AT WORKSHOPS

But besides having fun, we also need to educate ourselves. We cover a variety of topics in our workshops, which are held both online and in person. These include topics on how to set up your own e-shop, or introducing new products, apps and tools you can use.

WE ATTEND INTERESTING CONFERENCES

At various trainings and conferences, we draw more detailed information from our industry, which we can then pass on to you or implement directly into our processes to provide you with even better service.

T-SHIRTS —

T-shirts are an integral part of our everyday life. They have evolved over time into an art and personal expression phenomenon from the original practical workwear purpose. A canvas for expressing creativity, opinions, or interests.

MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers. The reason for these qualities is the size of an individual fiber – and merino wool fibers are very fine, thinner than 18 microns.

MERINO RISE 157, 158

T-shirt men's · women's

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Mercerization results in higher strength and better color stability of the material.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production and reduction of the carbon footprint.

FLEECE —

Fleece is a contemporary fabric with outstanding thermal insulation properties. It is becoming increasingly popular for sports and outdoor activities. Recycled PET bottles are frequently used in its production, which positively impacts the environment.

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

Softshell jacket men's · women's
S-3XL · XS-2XL

Softshell: 100 % polyester, Nanotex® finish; TPU membrane; perforated micro fleece,
96 % polyester, 4 % elastane, waterproof 5 000 mm, breathable 600 g/m²/24h, 280 g/m²

- impressive softshell texture · full-length coil zipper with flap · drawstring hood · hood and sleeve hems adjustable by velcro
- pockets with reverse coil zipper · contrast elements · Woman's: slight fit cut

NANOTEX®
RESIST

NANOTEX RESIST

Certified fabric which has been fundamentally transformed through nanotechnology. The resulting fabric repels liquids, thus extending the lifetime of the jacket and helping it retain the natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

ACTIVE —

We are all active in different ways. Some of us go for a run, others practice yoga, and some of us hike in the mountains. However, one thing we have in common is clothing made from quick-drying and breathable materials.

- heavy weight cotton woven terry · decorative bordure on both sides
- soft and absorbent fabric · label useful as a hanging loop
- gift suitable for embroidery

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

BAMBOO TOWEL ⁹⁵¹ BAMBOO BATH TOWEL ⁹⁵²

Towel · Bath Towel
50 x 100 cm · 70 x 140 cm · bordure: 7,5 cm
Terry, 70 % viscose (bamboo), 30 % cotton, 450 g/m²

- heavy weight bamboo woven terry
- decorative bordure with satin yarns
- soft and highly absorbent fabric
- label useful as a hanging loop
- luxury gift suitable for embroidery

RIMECK®

WORKWEAR MADE REAL

The RIMECK® brand effectively melds the rigorous demands of workwear with the latest fashion trends. Our products not only look great but also withstand the rigours of everyday wear. Each piece must satisfy four essential criteria - striking design, meticulous craftsmanship, top-quality materials, and a primary focus on your safety. Rest assured, we are committed to this principle.

VERTEX

LUXURY COLLECTION BY RIMECK®

The VERTEX collection combines technologically advanced fibers, comfort and an outdoor look. Workwear can thus be highly durable, flexible and stylish at the same time!

CERTIFICATION - W07

EN ISO 13688:2013/A:2021 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, wearout, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

- **WATER RESISTANT TREATMENT (W55, W56)**

The waterproof TPU membrane resists moisture penetration very well while maintaining the flexibility of the entire material. Water column 10 000 mm.
- **BREATHABLE MATERIAL (W55, W56)**

The 3-layer material helps to regulate water vapour, reliably moving it away from the body and creating a feeling of comfort. Breathability of 4,000 g/m²/24 hours.
- **THERMAL REFLECTIVE ZONE (W55, W56)**

Thermo reflective zone on the back.
- **ANTI-SOILING FINISH (W07)**

The ability of the top material to repel liquid, dirt and greasy dirt.
- **CORDURA (W07)**

The use of CORDURA® material makes the trousers even more resistant, especially against punctures or tearing.

Fleece, 100 % polyester, antipilling finish; complementary material: plain weave, 100 % polyamide, 360 g/m²

- highly insulating fabric · shoulders and elbows covered by a waterproof, abrasion-resistant fabric
- full-length molded zipper · pockets with molded zipper
- sleeves ended by cuffs · bottom hem adjustable by elastic drawstring

CASUAL 550

Softshell jacket men's
S-3XL

Knitted softshell: 100 % polyester; micro fleece - 100 % polyester
Softshell: 96 % polyester, 4 % elastane; micro fleece - 100 % polyester, Lining: 100 % polyester, 350 g/m²

- 2-layer softshell · combination of knitted and plain fabric · full-length reverse coil zipper
- sleeve hems adjustable by velcro · pockets with reverse coil zipper · 2 inner pockets · contrast elements

RIP STOP

Very strong, regularly repeating weave. In this smooth fabric, thick warp and weft threads are interwoven in intervals of 5-8 mm. The surface gets an effect of a grided structure. This apparent grid significantly increases the fabric's resistance to ripping and tearing.

Rip Stop, 100 % polyamide, inner silver coating;
lining: Fleece, 100 % polyester, antipilling finish, 300 g/m²

- full-length molded zipper with chin protection · bottom hem adjustable by elastic drawstring
- inner pocket with velcro · access for branding in side lining · contrast elements

509
S-4XL

For further information about the delivery date of new arrivals, please contact the Sales department.

SEGMENTED STRIPES

Retroreflexive stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

HV DROP 5V3

Softshell jacket unisex
M-4XL

Softshell: 100 % polyester; breathable membrane; micro fleece, 100 % polyester
waterproof 14 000 mm, breathable 2 000 g/m²/24h, 300 g/m²

- high visibility clothing in two-colour design · waterproof, breathable, fluorescent fabric
 - segmented retroreflective bands · back part with a yoke
- full-length reverse coil zipper with chin protection · sleeve hems adjustable by velcro
- welt pockets with reverse coil zipper · inner breast zip pocket with access for branding
 - bottom hem adjustable by elastic drawstring · hanging loop

5V3
M-4XL

 2,3 **EN ISO 20471**
EN ISO 13688

HV GUARD 4 IN 1^{5V2}

Jacket unisex
M-4XL

Upper jacket: Oxford, 100 % polyester with PU finish, retroreflective bands 3M, 210 g/m²
Inner fleece: Polar fleece, 100 % polyester, retroreflective bands 3M, antipilling finish on both sides, 280 g/m²

· high visibility clothing · multipurpose use 4 in 1 in two-colour design

5V2
M-4XL

Upper jacket:

- waterproof, breathable, fluorescent fabric · full-length molded zipper with flap
- removable hood with reinforced peak, hidden in the collar
- hood and bottom hem adjustable by elastic drawstring
- removable sleeves · sleeve hems with elastic band, adjustable with velcro
- multifunctional pockets · taped seams · access for branding in back lining

EN 343+A1, EN ISO 20471, EN ISO 13688

Innerfleece:

- removable inner fleece jacket · insulating fluorescent fabric
- full-length molded zipper · pockets with molded zipper
- trimmed by elastic stripe

EN ISO 20471, EN ISO 13688

HV ESSENTIAL 4V6

Sweatshirt unisex

M-3XL

French terry, brushed inner side, 100 % polyester, retroreflective bands 3M, 300 g/m²

- high visibility clothing · straight cut with side seams · 1:1 rib knit bottom hem, cuffs and neckline

4V6
M-3XL

HV DRY 1V8

T-shirt unisex

S-3XL

Grid knit, 100 % polyester, segmented retroreflective bands, 150 g/m²

- quick-drying fluorescent fabric · segmented retroreflective bands · cut with side seams · 1:1 rib knit neckline hem

1V8
S-3XL

HV FLEECE JACKET 5V1

Fleece unisex

M-3XL

Fleece, 100 % polyester, antipilling finish, retroreflective bands 3M, 280 g/m²

- high visibility clothing · insulating fluorescent fabric · full-length molded zipper in 01 colour
- welt pockets with molded zipper · bottom hem adjustable by elastic drawstring · sleeve hems with elastic band

5V1
M-3XL

HV PROTECT 1V9

T-shirt unisex

S-3XL

Interlock pique, 55 % cotton, 45 % polyester, retroreflective bands 3M, 175 g/m²

- fluorescent polyester on the outer side · cotton on the inner side
- cut with side seams · 1:1 rib knit neckline hem

1V9
S-3XL

HV RUNWAY 2V9

Polo unisex
S-3XL

Interlock pique, 55 % cotton, 45 % polyester, retroreflective bands 3M, 175 g/m²

- high visibility clothing · fluorescent polyester on the outer side · cotton on the inner side
- cut with side seams · 1:1 rib knit collar with a contrast stripe

CERTIFICATION

of RIMECK work clothes

Selected garments from the collection HIGH VISIBILITY (HV) Rimeck correspond to the international standards, which determine the optimal form of protective Plaining with high visibility. Certified garments from the HV collection are supplied with a leaflet providing information on proper storage, treatment and purpose.

EN ISO 20471:2013 – High visibility Plaining – this international standard specifies requirements for Plaining with high visibility, which is able to visually indicate the presence of a user for vehicles or other mechanized means of transport under any light conditions, both in daylight and when illuminated by headlights of vehicles at night.

High visibility Plaining are made of fluorescent material, and in combination with reflective stripes are divided into three categories:

 **Category 3** – the highest level of protection – the minimum required substrate surface is 0.80 m² and 0.20 m² of retroreflective material.

 **Category 2** – the medium level of protection – the minimum required substrate surface is 0.50 m² and 0.13 m² of retroreflective material.

 **Category 1** – the minimum level of protection – the minimum required substrate surface 0.14 m² and 0.10 m² of retroreflective material.

EN 1150:1999 – Protective Plaining – caution Plaining with high visibility for non-professional use – standard specifies requirements for optical properties of caution high visibility Plaining suitable for adults or teenagers, not for professionals. The garments are designed for visual indication of the presence of users in all light conditions, both in daylight in urban lighting and when illuminated by headlights of vehicles at night.

EN 343:2003+A1:2007 – Protective clothes – Rain protection - European standard determining the properties of fabrics and seams of a protective garment. The characteristics of these are measured for the outside of the clothes. After achieving the specific permeability requirements and reaching the appropriate certification, it provides protection against water penetration and resistance against steam penetration for the wearer.

EN ISO EN ISO 13688:2013/A1:2021 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

TYPE 2 – foam plastic or other filling material in trouser pockets, or permanently attached to trousers.

 **LEVEL 0** – only suitable for use on a flat surface - does not protect against punctures

 **LEVEL 1** – suitable for use on flat or uneven surfaces - protection against puncture with a force of at least 100 ± 5 N

 **LEVEL 2** – suitable for use on flat or uneven surfaces in demanding conditions - protection against puncture with a force of at least 250 ± 10 N

MATERIALS

fabric and finishes

NATURAL MATERIALS

COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India,the USA and China.

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

MERINO WOOL

Active fiber that regulates body temperature changes and is one of the most breathable natural fibers. The fiber can absorb large amounts of moisture – along with odour molecules in the sweat. Natural elasticity maintains dimensional stability, and the fabric is easy to maintain

VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorptinon features. Compared to cotton, it is softer, shinier and finer.

SYNTHETIC MATERIALS

ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as poyster. Mechanical and chemical treatment influences the final product’s properties.

POLYETHYLEN

Currently the most widely used polymer in the world, characterized by high strength, friction resistance, zero moisture content and chemical resistance. Thanks to its properties it is ideal for the production of safety protective equipment protecting against mechanical influences and wear.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production, they leave a lower carbon footprint and reduce environmental pollution. By recycling we achieve the same quality and properties as with ordinary polyester.

POLYACRYL

Acrylic/polyacrylic is a wool-like synthetic fiber produced by polymerizing acrylonitrile. Final products are durable, soft, flexible and warm, but unlike wool, they are hypoallergenic, light, quick drying, easier to maintain and wrinkle-resistant.

BRANDED MATERIALS

SUPIMA®

The brand represents the finest cotton of 1% worldwide production. This type of the US grown Pima cotton has over a hundred years’ history. Its unique extra-long fibers are twice the strenght of regular cotton. They are resistant to pulling, breaking and tearing which makes products made of it incredibly smooth, resistant, non-pilling and keeping their appearance for a long time.

NANOTEX RESIST

Certified fabric which has been fundamentally transformed through nanotechnology. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

SOFTSHELL

Softshell is a laminated textile for modern and sports plain weaveing and plain weaveing for outdoor activities. It is divided into membrane and nonmembrane. Plain weaveing made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

CORDURA® CLASSIC

The CORDURA® fabric is made in accordance with approved standards of the company INVISTA. CORDURA® holds of stains, resists tears and abrasions like no other fibers. Its strength ensures high longevity. CORDURA® is a registered trademark of INVISTA for durable fabrics.

3M™ STRIPES

3M retrorreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3M™ technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm² of the fabric there are up to 30,000 glass beads.

SEGMENTED STRIPES

Retroreflexive stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

BIONIC-FINISH® ECO

Environmentally friendly and highly durable hydrophobic textile finish based on proprietary technology that improves the functional properties of the fabric: repels impurities, it is breathable and better resists adverse weather conditions.

FABRICS

SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

PIQUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and plain weaveing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and plain weaveing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

DOUBLE FACE INTERLOCK KNIT

Double face knitting also called double-sided. The wave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction.

GRID KNIT

Quick-drying, breathable knit for the production of modern, functional clothing. The special grid structure perfectly moves moisture away from the body and expands it onto the fabric surface for fast drying, making it feel fresh, dry but also cooling the body. High elasticity ensures maximum comfort during wear.

RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 1:1 or 2:2. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts.

FRENCH TERRY – not brushed

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strenght, absorption as well as the volume of the fabric.

FRENCH TERRY – brushed

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has antipilling finish.

FLEECE

Weft knitted fabric characteristic with brushed dense teaseled soft surface on both sides of the material. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with antipilling finish. Products are suitable for embroidery and laser engraving.

PLAIN WEAVE

Plain weave fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Plain weave fabrics are manufactured from high quality combed cotton or polyester.

POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough. It is made by a plain weave wave which has a higher amount of warp than weft threads.

MICRO TWILL

The use of two-fold composition yarn with high density 100/2 occurs a very petty threading. This creates a thin, but effective diagonal lines that gives the twill weave an elegant and modern look. It is a popular non - wrinkling fabric with high breathability and soft feeling.

OXFORD

Wave derived from canvas wave. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic yarns.

RIP STOP

Very strong regularly repeating wave. In this smoth fabric are interwoven thick warp and weft treads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

TWILL

Wave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill wave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matte appearance.

TERRY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton.

JACQUARD KNIT

Very interesting plastic patterns can be achieved using the jacquard technique in a combination of two colors. We call regular patterning, which has a different reverse side and the obverse side is made up of visible eyelets, "birdseye". Due to its strength and stability in shape, this pattern is suitable for use on cuffs or collars and at the same time underlines the high quality and luxury of the product.

FINISHES

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Merceration results in higher strength and better color stability of the material.

SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

ENZYME WASH

The purpose of an enzyme wash is to reduce loose fibers on the surface of the fabric and improve its touch and appearance. For this type of treatment, an organic-based compound is used which is added directly to the dye bath. This procedure significantly reduces the amount of energy required during the process.

EASY CARE

The surface finish based on modification of the cotton fiber cellulose, which increases the flexibility of the material. It prevents the creases while wearing and washing cycles, thereby reducing wrinkling, easier ironing, shape stability and dimension stability.

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric’s pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

PU FINISH

A long-lasting polyurethane layer that is applied from one side of the base fabric. It provides water, moisture resistance, abrasion and dirt resistance. Due to the special composition, the layer is very flexible, lightweight and does not negatively affect the other properties of the product.

PA FINISH

Acrylic treatment is used to improve the mechanical and practical properties of the fabric. It is mainly used in outdoor clothing and is characterized by wind resistance and tensile strength.

TPU LAMINACE

Durable top layer made of thermoplastic polyurethane ensures stability of material properties in a wider range of conditions. The combination of the TPU membrane and the top material maintains the flexibility of the product and provides waterproof and abrasion resistant surface with excellent bend and tensile strength.

SILVER COATING

A special matte silver coating applied from the inside of the fabric improves the functional properties of the material. It increases water resistance, prevents transparency of the top material and increases resistance to damage potentially caused by washing.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt, which you will appreciate especially in the work environment. Dirt or grease make the droplets on the treated fabric that can be easily wiped off, thereby extending the life of the product.

WATER REPELLENT FINISH

Special surface finish preventing the penetration of moisture and fabric absorbency, which improves its functional properties - water simply runs off the surface in the form of small drops.

LEGEND

NOVELTIES

NEW PRODUCT

For information about stock availability please contact our sales department.

NEW COLOUR

For information about stock availability please contact our sales department.

MATERIALS

ELASTANE

A synthetic fiber that contains polyurethane bonds of high elasticity.

ORGANIC

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes.

MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers.

THREE-LAYERD SOFTSHELL

Three-layerd softshell with membrane

DOUBLE-LAYERD SOFTSHELL

Double-layerd softshell

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics.

TYPES OF LABELS

TEAR OFF

Tear off label.

STICKER LABEL

Label in a form of a sticker. Can be easily taken off.

LABEL FREE

The products have only a small size label behind the neck for easy rebranding

TYPES OF SEAMS

FLAT SEAMS

Double-sided cover stitch which is flat ensures maximum wearing comfort.

TAPED SEAMS

Technology supporting the waterproofness of material at seams. The waterproof tape is applied thermally under pressure over the inside seams.

MATERIAL PROPERTIES

WINDPROOF

Windproof material prevents wind and chills from penetration.

WATERPROOF

Rating in milimetres to indicate material's resistance to water pressure. The higher the water column is, the longer the fabric will remain waterproof.

EXTRA DRY

Extra dry material.

BREATHABLE

Rating in g/m² per 24hours. The ability of a fabric to allow moisture vapor in grams in square meter per day. The higher the value is, the better fabric breathes.

COOL/WARM

Soft, easy care, quick-drying and conductive fabric.

THERMOREGULATION

Keeps you warm when it's cold and reversed.

ODOR RESISTENCE

Thanks to moist absorption it keeps sweat out of your skin and therefore it's antibacterial. The clothing stays fresh longer.

MATERIAL FINISHES

SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however more lasting. It makes the product soft to the touch, more dirt-proof and the prints hold much better.

ENZYME WASH

This treatment results in a shiny and soft surface that is also resistant to pilling.

ANTIPELLING FINISH

The antipilling finish lowers the pilling tendency of the fabric.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt.

WATER REPELLENT FINISH

Special finish against the penetration of moisture and fabric absorbency.

EASY CARE

Surface finish eliminates fabric wrinkling to provide product easy care.

MULTIFUNCTION PRODUCTS

3 IN 1

Multi use jacket can be worn as one whole winter jacket, or separately as a windbreaker and a fleece

4 IN 1

Multi use Hi-Vis workwear jacket can be worn as one whole, upper and inner part separately, or just the upper jacket without sleeves as a vest
